

WEB ENABLED SYSTEM AND METHOD FOR COMPONENT HARDWARE
REPAIR COLLABORATION AND MATERIAL REPLACEMENT

ABSTRACT OF THE DISCLOSURE

An internet-based system and method are provided for allowing component hardware repair and disposition collaboration by internal users and external users. A server is configured with a database of component service needs and component service solutions. The server is configured with a user interface allowing a user to input information into the database. This information, including component service capabilities and component service needs, is uploaded to the server. A user can then download information from the database including service capabilities of other users. A computer, having a connection to the server, allows the user to upload and download information.
